## Functionality / Properties

### Operating mode

#### 2 point:

Connect power supply to wire 1+2, actuator drives to position 1. Is also wire 3 connected to the power supply, actuator drives to position 0.

#### 3 point:

Connect power supply to wire 1+2, actuator drives to position 1. Is wire 1+3 connected to the power supply, actuator drives to position 0.

The actuator is overload-proof, requires no limit switches and automatically stops, when the end stop is reached.

### Direct mounting

Simple direct mounting on the damper shaft with a clamp, protection against rotating with enclosed anti-rotation lock or rather at intended attachment points

### Manual override

Manual override with selfresetting pushbutton possible (the gear is disengaged as long as the button is pressed).

### Mode switch

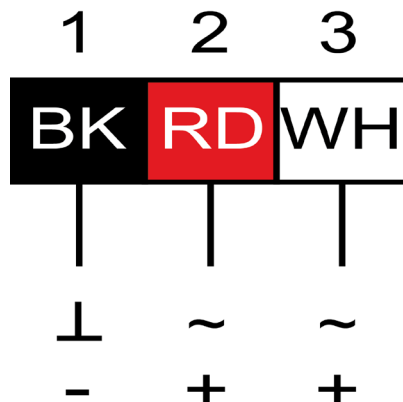

DIP switch under the case cover  
R / CW: rotary direction right / clockwise  
L / CCW: rotary direction left / counter clockwise

L / CCW

R / CW

## Connector / Security Note
